Professional Summary

Backend Engineer specializing in ASP.NET Core 8 and secure API architecture. Experienced in designing scalable RESTful systems using JWT-based authentication, role-based authorization, and clean layered architecture. Built an AI-powered recruitment platform integrating LLM-based resume evaluation and dynamic match-scoring logic. Strong focus on database performance optimization and production-ready backend design.

Technical Skills

Backend: ASP.NET Core 8, RESTful APIs, JWT Authentication, Role-Based Authorization, Middleware, Clean Architecture

Frontend: React 19, Redux Toolkit, Protected Routing, Axios, Tailwind CSS

Database: SQL Server, Stored Procedures, Schema Design, Indexing, Query Optimization

Tools: Swagger, Git, SMTP Integration, PDF Text Extraction, LLM Integration

Experience

Product Engineer Intern

Nov 2025 – Feb 2026

Kanini Software Solutions

- Designed and implemented secure RESTful APIs using ASP.NET Core 8 with JWT-based authentication and role-based access control.
- Architected layered backend structure (Controller → Service → Repository) improving maintainability and enforcing separation of concerns.
- Designed normalized SQL Server schema (9+ tables) and applied indexing strategies to optimize query performance.
- Implemented centralized exception-handling middleware to standardize API responses and improve debugging efficiency.
- Developed production-ready React SPA with protected routing and centralized authentication state management using Redux Toolkit.
- Secured Swagger documentation with JWT bearer authentication to restrict API testing to authorized users.

Projects

AI-Integrated Job Portal System

- Built multi-role recruitment platform (Admin, Employer, Job Seeker) implementing strict policy-based authorization.
- Developed backend pipeline for resume (PDF) upload and text extraction for structured processing.
- Integrated LLM-based evaluation workflow to transform unstructured resume and job description data into structured JSON output.
- Designed weighted skill-alignment scoring engine to compute dynamic candidate-job match percentage.
- Integrated chatbot functionality to provide hiring insights and application tracking support.
- Implemented audit logging and automated SMTP-based notification system for application events.

Education

B.Tech – Information Technology

2021 – 2025

Adhiyamaan College of Engineering

CGPA: 6.9
